Pain Point: The Safety Dilemma of Students Traveling at Night

Have you ever felt scared, nervous, or lonely when walking alone at night or in an unfamiliar environment?

50% of students (often + sometimes) feel scared, nervous, or lonely when walking alone at night or in unfamiliar environments, reflecting students' real safety concerns during nighttime travel.

Have you ever felt scared, nervous, or lonely when walking alone at night or in an unfamiliar environment?

In which situations would you most want someone to accompany you?

To what extent do you think having a companion would improve your sense of safety?

Our Solution: SafePath

Matched Walking Partners

Walk with verified classmates

Location Sharing

Share your location with family and friends in real time

One-Tap Emergency Help

Quickly contact help in an emergency

Live Demo: SafePath Core Features

01

Identity Verification

Student identity verification helps ensure community safety

02

Match with a Companion

Find walking partners based on route and time

03

Real-Time Sharing

Location and trip information update in real time

04

Emergency Support

One-tap SOS can contact friends and emergency services

Demo Segment: This app interface shows how the core features work in practice—"Active Walk" mode is used for real-time monitoring, "Quick Actions" for matching with companions and SOS, and the "Recent Trips" history shows all completed trips and status tracking. Users can easily access emergency contacts and enable Guardian Mode for additional safety protection.

Evidence Validation: How SafePath Solves Key Safety Problems

Finding 1

Before: Students could not safely show their real-time location

Solution: We built verified location sharing functionality together with families

Basis: 60% of users believe that informing their family members increases their sense of security.

Evidence Validation: How SafePath Solves Key Safety Problems

Finding 2

Before: There was no reliable peer-matching mechanism, and users struggled to find trusted walking companions

Solution: We established an on-campus identity verification system, limiting matching to verified students to ensure community safety

Basis: 76.67% test users felt that adding student verification provided a sense of security.

Route Verify Match Walk

Demo mode — this verification step is for demonstration only Skip verification ->

Student Identity Verification Required

To ensure the safety of all walkers, please confirm your student status before each match. Your information is only used for this trip and will not be shared.

Home Match History SOS

Which of the following features would most effectively enhance your sense of security when traveling alone?

Evidence Validation: How SafePath Solves Key Safety Problems

Finding 3

Before: Students felt helpless in emergencies

Solution: We added a one-tap SOS feature for emergency contacts

Basis: 70% believe the emergency SOS feature is essential

Limitations and Next Steps

Current Limitations

- Privacy concerns are the primary worry (66.67% of users)
- Matching reliability is critical (70% of users are concerned about unreliable matches)
- Trust must be built through identity verification and safety mechanisms
- The user experience must be simple (20% of users worry about complexity)

Next Steps

- Implement robust student identity verification (76.67% of users expressed trust in this)
- Develop comprehensive emergency SOS and safety check-in features (70% and 53.33% of users value these features)
- Expand the user base from university students to middle school students and working professionals
- Continuously improve the matching algorithm based on user feedback
